

whois lvl1

can use

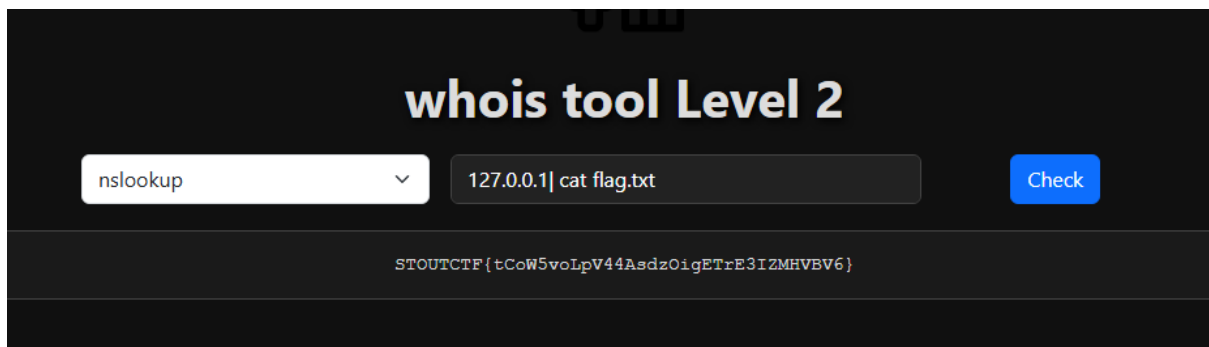

<https://github.com/swisskyrepo/PayloadsAllTheThings/tree/master/Command%20Injection>

The screenshot shows the 'whois tool v2.0' interface. It has a dark background with white and yellow text. At the top, the title 'whois tool v2.0' is displayed in a large, bold, yellow font. Below the title, there are two input fields: a dropdown menu on the left with 'nslookup' selected, and a text input field on the right containing '127.0.0.1; cat flag.txt'. To the right of the text input field is a blue button labeled 'Check'. Below these inputs, the output of the command is shown in a light gray box with a dark background, displaying the following text: '1.0.0.127.in-addr.arpa name = localhost.' and 'STOUTCTF{6GmWewZFLZqlsEmSxeHehXCMajEEI9IX}'.

STOUTCTF{6GmWewZFLZqlsEmSxeHehXCMajEEI9IX}

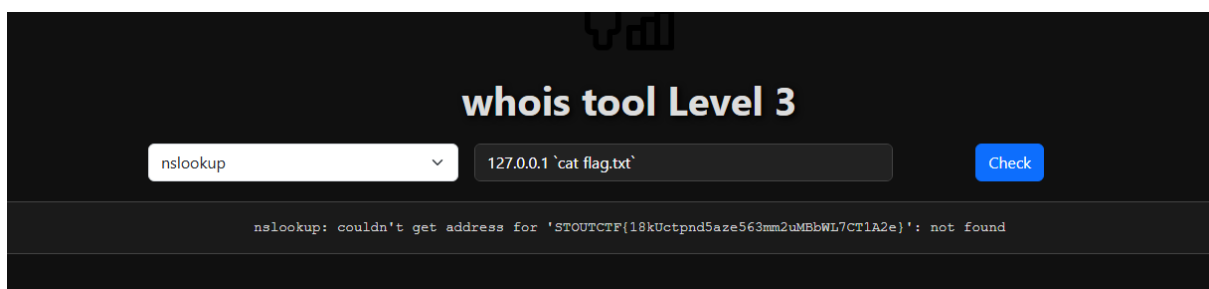

whois lvl2

The screenshot shows the 'whois tool Level 2' interface. It has a dark background with white and yellow text. At the top, the title 'whois tool Level 2' is displayed in a large, bold, yellow font. Below the title, there are two input fields: a dropdown menu on the left with 'nslookup' selected, and a text input field on the right containing '127.0.0.1| cat flag.txt'. To the right of the text input field is a blue button labeled 'Check'.
