

Part 1:

The challenge is called "Abandoned Airwaves."

The image contains a few key clues:

- The radar tower behind the building is a noticeable feature. If you recognize it, finding the location should be fairly simple.
- The red star on the gas container points to a former Soviet country.

To solve the challenge, search for abandoned radio/radar stations in former Soviet countries. The Duga-1 station should be one of the top results.

The flag shown in the image represents the name of the station: Duga-1 or Duga-1 Station will work

Part 2:

You already know the name of the station (Duga-1).

Go to Google Maps and search for the Duga-1 radar station.

Look through the available photo spheres near the station and find the one that matches the image from the previous part.

Once you find the correct photo sphere, get the coordinates from the URL.

Use a tool to find the estimated sunset time for a selected date. I used <https://www.sunearthtools.com/>.

The flag is the time of sunset on December 16, given in 24-hour format.

The correct time is 15:52.
