# Nothing to see here

When we open the txt file, we can see nothing. Like my future. If you use VSCode, you can see there's something

For this challenge, use whitespace decoder

We got a another ciphertext. "Everything that ends with '=' is base64". Remember this until you gone from this world. Go to cyberchef to decode the base64

It say theres nothing here but you cant fool 'you' twice! Its not me because I did not get fooled. Go to whitespace decoder again and got the flag.
